## Letter of acknowledgement

Medfem Fertility Clinic has in close collaboration with ORIGIO been carrying out a clinical validation of the new SAGE 1-Step culture media for IVF. The SAGE 1-Step is a new single step medium for uninterrupted continuous embryo culture and transfer.

It has been a great pleasure working with Medfem Fertility Clinic. The clinic succeeded including the targeted number of patients in the test within the agreed time frame (February to August 2014). This was done due to a very well organized team, with motivation and clear focus on delivering high quality data on the more than 150 patients.

By attention on providing valid figures the testing executed by Medfem Fertility Clinic will be an important brick in the information around the SAGE 1-Step media that will benefit clinics and patients around the world.

The team at Medfem Fertility Clinic can be very proud of their work – thanks for all your efforts.

Best regards,

Rasmus Linde  
Manager, Clinical Affairs  
ORIGIO A/S  
Denmark

Note: SAGE 1-Step is available in in two formulations with protein source HSA or SPS and is CE marked (SAGE 1-Step with HSA only), Cleared by the FDA and Canada Medical Device licensed
